## About us

BluTest Laboratories – A Tentamus Company, is an ISO 17025 UKAS-accredited contract research organisation (CRO) and testing laboratory (No. 4597) supporting the cosmetics industry by providing research and development services.

We offer cost-effective microbiology contract research and development services to companies involved in cosmetics, raw materials, and preservative manufacturing, ensuring that your products conform to regulatory requirements and meet the highest industry standards both in the UK and worldwide.

## Why choose BluTest Laboratories

Formulation Development & Optimisation

“One-Stop Shop” for Your Cosmetic Testing Needs With Tentamus

UKAS accredited to ISO 17025 Testing Lab (No. 4597)

Bespoke projects for your formulation development

UKAS, DAkkS and GMP services within Tentamus

## Formulation Development & Optimisation

We assist manufacturers with the development of preservative systems and antimicrobial cosmetic and personal care products, ensuring that these formulations are effective without compromising texture, scent, or colour. We can help you optimise the efficacy of your preservative systems and active formulations while maintaining or improving product safety and quality.

## Custom Preservative Solutions

Choosing the right preservative is a critical part of product development. To help you better understand how best to keep your formulations free from contamination, we can screen target preservatives against a range of organisms in a variety of matrices using high-throughput tests. We also help manufacturers explore alternative preservatives, focusing on natural or less controversial options by testing novel raw materials or combinations that maintain the product's integrity and safety.

## Antimicrobial Formulation Efficacy

Cosmetics and personal care products can often have secondary antimicrobial functions, and our experienced team of scientists can validate these claims against a range of organisms, including viruses and biofilms. From hand washes and gels to oral care products and novel antimicrobials, our UKAS-accredited service\* ensures your product's efficacy claims comply with regulatory requirements.
