About us

Southern Microbiological Services – A Tentamus Company is a UKAS-accredited laboratory (No. 1922) dedicated to supporting your cosmetics testing needs. We specialise in microbiological testing services that help cosmetics and personal care manufacturers ensure the highest quality and safety of their products before they reach consumers.

As part of the Tentamus Group, we're able to offer more than the capabilities of a single lab – we collaborate with our sister laboratories to provide comprehensive support, ensuring excellence in both quality and customer service.

Enumeration Testing

We collaborate with clients to ensure quality and consistency in both finished products and raw materials. Our microbiological services assist with contamination resolution, trending, and product development, offering troubleshooting support and on-site visits when needed.

Detection Testing

We provide detection tests for pathogenic microorganisms in cosmetics, including *Staphylococcus aureus*, *Pseudomonas aeruginosa*, *Candida albicans*, and *E. coli*, a key hygiene indicator in production.

Preservative Efficacy Testing

We ensure safety and stability in cosmetics product development through microbiological challenge testing, evaluating the effectiveness of the preservative system by introducing microorganisms to monitor their survival or growth.

Environmental Swab Testing

We provide comprehensive environmental swab testing services, including on-site visits, to help ensure a clean and compliant production environment.
